ELECTRICAL PEDESTALS

- ◻ LOTS WITH INTELLIGENT PARKING LOT CONTROLLERS *
- ◼ LOTS WITHOUT INTELLIGENT PARKING LOT CONTROLLERS **
- ◼ ELECTRICAL PEDESTALS FOR DIESEL VEHICLES ***

All electrical pedestals at Innovation Place (except those for diesel vehicles) rotate on and off on a proportionate scale from -9°C to -25°C as an energy saving feature. As the temperature falls, the quicker the plugs cycle and the shorter duration they are off until the temperature reaches -25°C. At -25°C or lower, the plugs remain on.

- * Intelligent Parking Lot Controller (IPLC) pedestals cycle individually, not as a section.
- ** These pedestals cycle as a section.
- *** These pedestals do not cycle. They remain on while a load is attached.
